IN THE CLAIMS:

1-84. CANCELLED

85. (Currently Amended) A method of creating a pattern on a body, said method comprising:

arranging a liquid to be between a template and said body;

orienting said template proximate to said liquid; and

moving a portion of said liquid between said template and said body ~~while having said liquid conform to a profile of said template by applying an electric field between said template and said body~~ to form a contiguous region of said liquid between two spaced-apart electric field gradients, with each of said electric field gradients being defined by first and second electric fields, with said first electric field being adjacent to said second electric field and said first electric field being greater than said second electric field.

86. (Currently Amended) The method as recited in claim 85, wherein said pattern ~~provides a surface of said liquid with~~ comprises a topology selected from a group of topologies consisting essentially of recessed and protruded, smooth, and planarized.

87. (Currently Amended) The method as recited in claim 85, wherein ~~applying said electric field causes a~~ moving said portion of said liquid ~~to move~~ further includes moving said portion away from said ~~substrate~~ body, toward said template.

88. (Original) The method as recited in claim 85, further includes solidifying said liquid.

89. (Currently Amended) The method as recited in claim 85, wherein said template further includes a surface facing said body and moving said portion of said liquid further includes applying ~~an~~ said first and second electric fields to said surface ~~that varies over an area of said surface~~.

90. (Currently Amended) The method as recited in claim 85, wherein ~~disposing~~ arranging said liquid further includes ~~dispensing~~ arranging a low viscosity liquid between said ~~substrate~~ template and said ~~surface~~ body.

91. (Original) The method as recited in claim 85, further including providing said template with an electrically conducting material.

92. (Currently Amended) The method as recited in claim 88, wherein solidifying further includes solidifying said liquid in the presence of said first and second electric fields.

93. CANCELLED

94. (Currently Amended) A method of creating a pattern on a body, said method comprising:

disposing a liquid between a template and said body;

orientating said template proximate to said liquid; and

moving a portion of said liquid between said template and said body toward said template to ~~have said liquid conform to a profile of said template by applying an electric field between said template and said body~~ form a contiguous region of said liquid between two spaced-apart electric field gradients, with each of said electric field gradients being defined by first and second electric fields, with said first electric field being adjacent to said second

electric field and said first electric field being greater than said second electric field.

95. (Currently Amended) The method as recited in claim 94, wherein said pattern ~~provides a surface of said liquid with~~ comprises a topology selected from a group of topologies consisting essentially of recessed and protruded, smoothed, and planarized.

96. (Currently Amended) The method as recited in claim 94, wherein ~~applying said electric field~~ moving said portion of said liquid causes a said portion of said liquid to ~~be attracted and subsequently~~ contact a portion of said template.

97. (Currently Amended) The method as recited in claim 94 ~~wherein said liquid composes a polymerizable composition and~~ further including polymerizing said liquid, with said liquid comprising a polymerizable composition.

98. (Currently Amended) The method as recited in claim 97, wherein polymerizing said liquid occurs in the presence of said first and second electric fields.

99-100. CANCELLED

~~102~~ 101. (Currently Amended) A method of creating a pattern on a body, said method comprising:

disposing a polymerizable liquid on said body;

orientating ~~said~~ a template proximate to said polymerizable liquid; ~~and~~

moving a portion of said polymerizable liquid toward said template ~~to have said portion of said liquid conform to a profile of said template by applying an electric field to between said template~~ to form a contiguous region of said polymerizable liquid between two spaced-apart electric field

gradients, with each of said electric field gradients being defined by first and second electric fields, with said first electric field being adjacent to said second electric field and said first electric field being greater than said second electric field; and

polymerizing said polymerizable liquid.

~~103~~ 102. CANCELLED

~~104~~ 103. (Currently Amended) The method as recited in claim ~~102~~ 101, wherein disposing said liquid further includes disposing ~~is~~ a low viscosity liquid.

~~105~~ 104. (Currently Amended) The method as recited in claim ~~102~~ 101, ~~wherein~~ further includes providing said template ~~comprises~~ with an electrically conducting material.

~~106~~ 105. CANCELLED

~~107~~ 106. CANCELLED

~~108~~ 107. (Currently Amended) The method as recited in claim ~~107~~ 101, wherein polymerizing said ~~pattern~~ liquid occurs in the presence of said electric field.
